### **VLSystems Joins MultiFactor Corporation's SecureAuth™ Partner Program**

*SecureAuth™ Now Offered by VLSystems to Provide Companies with the Industry's Most Secure Identity and Authentication Solution on the Market*

**IRVINE, CA—March 10, 2008**—VLSystems, a Microsoft Gold Certified partner and a Cisco Advanced Security Specialized partner, and MultiFactor Corporation, an innovator in authentication solutions, today announced that VLSystems will provide SecureAuth™ as a MultiFactor Corporation SecureAuth™ Partner.

"Protecting corporate private information is crucial," says Tom White, chief executive officer of VLSystems. "Partnering with MultiFactor will allow us to provide our customers with an innovative authentication solution to help secure their information in an easy to manage, yet cost-effective manner."

SecureAuth™ is a tokenless, non-phishable, two-factor identity enforcement solution. Software-based, but stronger than a hardware token, SecureAuth makes non-phishable authentication easy to manage and cost-effective. The SecureAuth solutions validate both the client and server sides, utilizing an appliance or a Web plug-in and current data stores.

"As both a Cisco and Microsoft partner, VLSystems is a strategic partner for MultiFactor in assisting our customers to remain secure," says Craig Lund, chief executive officer of MultiFactor. "VLSystems' focus on secure information solutions is the key to ensuring our customers achieve the maximum benefit of SecureAuth."

#### **About VLSystems, Inc.**

VLSystems, founded in Irvine, Calif. in 1978, is a Cisco Advanced Security Specialized partner and a Microsoft Gold Certified partner specializing in secure information solutions involving Cisco LAN/WAN,

data center and security, Microsoft advanced infrastructure, SharePoint Portal Server, workflow and collaboration, and managed services.

### **About MultiFactor Corporation**

MultiFactor Corporation is the developer of SecureAuth™, the strongest two-factor authentication solution available. The browser-based SecureAuth delivers and validates certificates without PKI. More secure than hardware or software tokens, SecureAuth is inexpensive to acquire, deploy and manage. Its elegant solution leverages the unrivaled strength of certificates to assure each party of the other's identity without the infrastructure of traditional authentication solutions. SecureAuth is deployed in more than 150 financial institutions and is trusted by organizations adhering to FFIEC and PCI Security Standards Council requirements.
